Dear Sir:

Transmitted herewith is an amendment in the above-identified application.

The fee has been calculated as shown below:

CLAIMS AS AMENDED

Col. 1	Col. 2	Col. 3	Small Entity	Other Than A Small Entity					
	Claims Remaining After Amendment		Highest No. Previously Paid For	Present Extra	Rate	Add'l Fee	Rate	Add'l Fee	
Total Claims	* 20	Minus	** 20	= 0	x \$9	\$	x \$18	\$0	
Independent Claims	* 3	Minus	*** 3	= 0	x \$42	\$	x \$84	\$0	
First Presentation of Multiple Dependent Claims						x \$140	\$	x \$280	\$0
TOTAL ADDITIONAL FEE FOR THIS AMENDMENT						\$		\$0	

* If the entry in Col. 1 is less than the entry in Col. 2, write "0" in Col. 3

** If the "Highest No. Previously Paid For" IN THIS SPACE is less than 20, write "20" in this space.

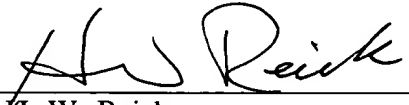

*** If the "Highest No. Previously Paid For" IN THIS SPACE is less than 3, write "3" in this space.

The "Highest No. Previously Paid For" (Total or Independent) is the highest number found from the equivalent box in Col. 1 of a prior amendment or the number of claims originally filed.

1. ☐ Small entity status of this application 37 CFR 1.9 and 1.27 has been established by a verified statement previously submitted or is enclosed.
2. ☒ No additional fee is required.
3. ☐ A check in the amount of is enclosed.
4. ☒ Please charge any additional fees or credit overpayment to Deposit Account No. 16 2463.
A duplicate copy of this sheet is attached.

Dear Sir:

AMENDMENT

Responsive to the Office Action mailed July 30, 2002, please amend the above-identified application as follows. A marked-up copy of the claims being amended follows in Appendix A.

In the Specification

Page 1, line 14:

al
Telescopic table legs are commonly used in work places for adjusting the table height for a variety of uses, such as positioning the work surface of a table for standing or various sitting positions. Electrically driven linear actuators are frequently employed to control the height of a table with telescopic legs. Such actuators include a reversible motor and drive gear assembly coupled to a power screw which extends concentrically within a telescopic leg assembly and couples to a drive nut for extending or retracting one leg with respect to another. Typically, the motor housing is coupled by threaded fasteners to a cap on the top of the inner leg and, as the motor is actuated, the metal-to-metal connection transmits undesirable motor vibration and resonant frequencies through the linear actuator support structure. This noise and vibration is also transmitted through the support structure and legs of the table. Efforts to reduce such noise and vibration in a work place environment have included providing motor
